

Check out what the Preschool & Kindergarten Classes have been up to in January!

In Math & Science, we explored the cause and effect of simple machines.

Inspired by famous architectures, the Koalas worked hard to build their own structurally sound buildings!

In a K'nex building center, the Honey Bear Class created their own headphones to "listen to music"!

The Sun Bear Class learned how the invention of the fishing pole more efficiently helped people catch fish. Afterwards, we went fishing for matching numbers!

After learning of Thomas Edison, we began to explore light around the classroom. Using a colorful prism, we created a rainbow reflection!

We explored an underwater sensory center after learning about Jacques Cousteau and his ocean explorations!
